Faculty of Information and Communication Technology

ITCS212 Web Programming
JQuery and JSON: Lab-Week7-1

---

1. Create a program that can do the following activities
   a. If you click on "Click me away!", then it will disappear.
   b. If you double click on "Double click on me", then it will disappear.
   c. If you click on the hide button, the text "Click on hide button I will disappear" will disappear.
   d. If you click on the show button, the text "Click on hide button I will disappear" will come back again.

Click me away!

Double click on me

Click on hide button I will disappear

[Hide] [Show]

2. Create a program that stores student information including student ID, first name and last name in the form of JSON array with details as follows:
   a. A form that has three text boxes for inputting data (student ID, first name and last name).
      i. When clicking the head of a form, the form will slide down with those text boxes
   b. Create one submit button for submitting data.
      i. When clicking the submit button, the data will be stored in JSON array format and notify success of storage
      ii. Show the data in the console.

Submission
Please zip all of your works into one zip file namely "**Lab-Week7-1-[Section]-[StudentID].zip**" and submit to the activity submission on Mycourses.
